## WH-C4 CHAIN HOIST

## WH-C4 Chain Hoist

# WH-C4 Chain Hoist

The William Hackett WH-C4 chain hoist meets and exceeds the requirements of the following international standards:

**British Standard BS EN13157:2004 + A1:2009**

**American Standard ASME B30.16-2012**

**Australian Standard AS1418.2-1997**

**South African Standard SANS 1594:2007**

**NORSOK R-002: 2017.**

The William Hackett WH-C4 chain hoist can be used within an operating temperature range of -40°C to +55°C.

The design and specification of the William Hackett WH-C4 chain hoist includes:

- **WORKING LOAD LIMIT RANGE:** 500kg to 50 tonnes.
- **LIGHT LOAD CAPABILITY:** the WH-C4 is tested and certified at 2% of the chain hoist rated capacity.
- **TWIN PAWL:** double safety; fitted as standard.
- **SAFETY LATCHES:** the WH-C4 chain hoist top and bottom hooks are fitted with heavy duty cast steel latches. The latch and hook tip are integrated creating a strong and robust hook closure.
- **OVERLOAD INDICATOR MARKS:** WH-C4 chain block top and bottom hooks have, as part of the hook forging, overload indicator marks either side of the hook throat. By measuring the distance between the indicator marks, the hook can be quickly and easily checked to see if any stretch has occurred due to misuse or overloading.
- **HAND CHAIN JOINER:** a unique hand chain joiner is used as a quick and secure method of joining the hand chain without the need to cut, bend, open and close a link of existing hand chain.
- **HOOK HOUSING:** the WH-C4 chain hoist top and bottom hook housing are secured with socket head cap screws/hex head bolts and nyloc insert locking nuts.
- **FLEETING/CROSS HAULING:** the WH-C4 chain hoist is tested and certified for fleeting or cross hauling applications up to 45° from the vertical without deration.
- **LOAD CHAIN:** WH-C4 chain blocks are fitted with load chain that fully complies with international standard BS EN818-7 Grade T (8).
- **OVERLOAD LIMITER:** available as an option upon request.

## WH-L4 LEVER HOIST

## WH-L4 Lever Hoist

# WH-L4 Lever Hoist

The Hackett WH-L4 lever hoist meets and exceeds the requirements of the following international standards:

**British and European Standard BS EN13157:2004 + A1:2009**

**American Standard ASME B30.21-2014**

**Australian Standard AS1418.2-1997**

**South African Standard SANS 1636:2-2007**

**NORSOK R-002: 2017.**

The design and specification of the William Hackett WH-L4 lever hoist includes:

- **WORKING LOAD LIMIT RANGE:** 800kg to 20 tonnes.
- **LIGHT LOAD CAPABILITY:** the WH-L4 is tested and certified at 2% of the lever hoist rated capacity.
- **TWIN PAWL:** double safety; fitted as standard.
- **SAFETY LATCHES:** the WH-L4 lever hoist top and bottom hooks are fitted with heavy duty cast steel latches. The latch and hook tips are integrated creating a strong and robust hook closure.
- **OVERLOAD INDICATOR MARKS:** the WH-L4 lever hoist top and bottom hooks have, as part of the hook forging, overload indicator marks either side of the hook throat. By measuring the distance between the indicator marks, the hook can be quickly and easily checked to see if any stretch has occurred due to misuse or overloading.
- **HOOK HOUSING:** the WH-L4 lever hoist top and bottom hook housings are secured with socket head cap screws/hex head bolts and nyloc locking nuts.
- **FLEETING/CROSS HAULING:** the WH-L4 lever hoists are tested and certified for fleeting or cross hauling applications up to 45° from the vertical without deration.
- **LOAD CHAIN:** the WH-L4 lever hoists are fitted with load chain that fully complies with international standard BS EN818-7 Grade T (8).
- **TRAVELLING END STOP:** is available as an option upon request. The travelling end stop can be fitted as a replacement to the standard end stop. The travelling end stop allows the user, when a WH-L4 lever hoist is in position, to move the end stop along the slack chain and position adjacent to the body of the lever hoist. This has the benefits of shortening the slack chain, and stopping any potential 'run' of load chain through the hoist when the operator comes to use it again.

## CP-C4 CHAIN HOIST

## CP-C4 Chain Hoist

# CP-C4 Chain Hoist

## CP-C4 Chain Hoist

The William Hackett CP-C4 corrosion protected chain hoist meets and exceeds the requirements of the following international standards:

**British Standard BS EN13157:2004 + A1:2009**

**American Standard ASME B30.16-2012**

**Australian Standard AS1418.2-1997**

**South African Standard SANS 1594:2007**

**NORSOK R-002: 2017.**

William Hackett has taken its extensive knowledge of corrosion protection acquired in the supply of specialist topside and subsea hoisting range to the offshore sector and translated this technology to a second generation range of William Hackett CP-C4 anti corrosion chain hoists. These hoists can be supplied in the following configurations;

- Single hook suspension unit
- Low headroom combined chain hoist and push travel trolley
- Low headroom combined chain hoist and geared travel trolley

All the above hoist configurations can also be supplied with the following options:

- Calibrated Grade T (8) load chain to BS EN818-7 zinc plated with zinc plated hand chain
- Calibrated Grade T (8) load chain to BS EN818-7 DT9 corrosion coated and hand chain Dacromet corrosion coated.
- Calibrated Grade S (6) 316L stainless steel load chain, hand chain and bottom hook (stainless steel bottom hooks are only available for 500kg and 1 tonne units)
- Overload protection option available.

### Features

- 500hrs + Protection against salt spray tests according to ASTM B117
- Twin pawls as standard
- Heavy duty forged safety catches
- Stainless steel fixings used throughout the hoist
- Hook housing is bolt connected using cap head screws and nyloc nuts
- All hoist components are corrosion protected
- Load chain meets the requirements of European standards: EN818-7
- Compact and robust design for easy handling

### Performance and Testing

The William Hackett CP-C4 chain hoist has been fully tried and tested to include:

- Minimum Breaking Load - a minimum of 4 x the WLL
- The load chain anchor / end stop tested to at least 2.5 x the WLL with no restriction of either the brake or gears
- All Hoists are 100% proof tested at 1.5 x the Working Load Limit
- Light load of 2% of Working Load Limit

## SS-L5 OFFSHORE LEVER HOIST

Salt Water Immersion Test  
Verification  
Report A0359376.02, Rev.1.

# SS-L5 Offshore Lever Hoist

The William Hackett second generation SS-L5 Offshore Lever Hoist is the first offshore lever hoist to be accredited by DNV-GL via a 'Saltwater Immersion test verification, Report No. A0359376.02, Rev.1. The report verifies that the SS-L5 type lever hoist can be safely used subsea over a 21 day single immersion and a 31 day multi immersion period. The design features, testing, guidance for use, maintenance and storage of the SS-L5 has also been developed in line with:

- BP document DEV-AAD-SS-SD-BP-0545 'specification and compliance requirements for lever hoists used subsea on BP projects.'
- IMCA DO28 June 2017 Rev. 2 'Guidance on the use of chain lever hoists in the offshore subsea environment'
- IMCA Document SEL-019:2007, Guidance for Lifting Operations

The SS-L5 also meets and exceeds the requirements of the following international standards:

British and European Standard BS EN13157: 2004 + A1: 2009

American Standard ASME B30.21-2014

Australian Standard AS 1418.2-1997

South African SANS 1636:2-2007

NORSOK R-002: 2017.

The William Hackett SS-L5 offshore lever hoist can be used within an operating temperature range of -40°C to +55°C.

The design and specification of the William Hackett SS-L5 offshore lever hoist includes:

- **WORKING LOAD LIMIT RANGE:** 800kg to 20 tonnes.
- **LIGHT LOAD CAPABILITY:** the SS-L5 is tested and certified at 2% of the lever hoist rated capacity.
- **DABS (DUAL ANTI-LOCK BRAKE SYSTEM):** allows the load chain to be adjusted in freewheel mode without locking the brake.
- **CONSTRUCTION AND DESIGN:** minimises ingress of contaminants to the internal mechanism and brake surfaces.

- **STAINLESS STEEL PAWL SPRINGS:** secured internally to reduce risk of damage.
- **STAINLESS STEEL FIXINGS:** all internal springs are stainless steel, circ clips securing the pawls onto the pawl stands, stainless steel nyloc nuts and socket head cap screws are used to secure all hook housings.
- **SINTERED/FUSED FRICTION MATERIAL:** directly onto the ratchet gear. Grooves in the friction material enable water to be dispelled from the friction surface more effectively during subsea operations.
- **LOAD CHAIN:** in accordance with BS EN818-7 Grade T(8) and Grade V (10) to JIS B8802 self colour.
- **CORROSION PROTECTED:** the complete brake mechanism is corrosion protected including the pinion shaft, disc hub, change gear, ratchet gear, pawls, pawl stands and load sheave. In addition the load chain guide, stay bolts and chain stripper are also corrosion protected.
- **HIGH PERFORMANCE WATERPROOF GREASE:** used throughout the hoist enhancing the corrosion protection.
- **ADJUSTABLE TRAVELLING END STOP:** the uniquely designed traveling end stop allows the operator to position the end stop at any point along the slack section of the load chain. When the lever hoist is in a final rigged position the traveling end stop can be positioned adjacent to the SS-L5 offshore lever hoist body. This has the function of preventing payout of the chain for whatever reason when the lever hoist is operated again.
- **OVERLOAD LIMITER:** available as an option upon request.

# Overhead Line and Rail Industry Lever Hoist

William Hackett's SS-L5 lever hoist complies with British Standard BS EN13157:2004 +A1:2009 and Network Rail Certificate of Acceptance PA05/06687. The lever hoist capacity ranges from 800kg to 10 tonnes and the designation RL5 1.5t capacity serves a dual role. As well as being approved for overhead line work by Network Rail, the lever hoist is also designed to be used with the "Ironman" rail handling system. For the "Ironman" usage the unit is rated to 1.5 tonne and painted yellow as specified by RIS-1701-PLT.

The design and specification of the William Hackett overhead line and rail industry lever hoists include:

- **THE RL5 "IRONMAN":** can be fitted with either a clevis shackle or omega link eradicating the need for the current connecting link between the clamp and the hoist. The whole system will be certified as one single piece of equipment reducing time and cost when it comes to the inspection and re-certification of the lever hoist, producing a more efficient and effective piece of equipment to use in the field.
- **TRAVELLING CHAIN 'END STOP':** the adjustable travelling end stop which can be positioned next to the body of the lever hoist to prevent slippage and run off.
- **DABS (DUAL ANTI-LOCK BRAKE SYSTEM):** prevents the accidental engagement of freewheel.
- **SLIP PREVENTION CONTOURED RUBBER "T" SHAPED GRIP:** specially designed to improve grip with gloves, especially in the wet.
- **SECURE HOOK CLOSURE:** the heavy duty cast latch interlocks with the nib of the hook to form a secure closure and prevents side load disengagement.
- **PERFORMANCE RATIO:** the Working Load Limit of 1.5t for the "Ironman" at a weight of 8.5kg – gives a performance ratio of 176 : 1
- **TWIN PAWLS, DOUBLE SAFETY SYSTEM:** two pawls of different lengths are fitted to provide one redundant pawl and one engaged at all times. Fully secured with stainless nut and bolts
- **SINTERED AND GROOVED FRICTION BRAKE PADS:** sintered brake material complete with grooves and zinc flake coating mean that the brake surface is kept clear of dirt or water and retain functionality in wet environments.
- **COMPLIANT LOAD CHAIN:** calibrated chain is in accordance with EN818-7.
- **LIGHT LOAD CAPABILITY:** tested and certified at 2% of the rated capacity but in operational mode has a 0% light load capacity.
- **CORROSION PROTECTION:** high performance waterproof marine grease is used throughout the hoist to give long term protection in the harshest environments. Zinc flake corrosion protection along with stainless steel throughout the hoist means extended longevity of critical components.
- **AVAILABILITY** of all spares and service kits allow customers to take the hoist back to almost factory finish.
- **THE RL5 "IRONMAN"** lever hoist can be used within an operating temperature range of -40°C to +55°C.

## ATEX-C4 Chain Hoist

# ATEX-C4 Chain Hoist

The William Hackett ATEX-C4 chain hoist complies with the requirements of ATEX Directive 2014 / 34 / EU and Machinery Directive 2006 / 42 / EC

The ATEX-C4 chain hoist meets and exceeds the requirements of the following international standards:

**British Standard BS EN13157:2004 + A1:2009**

**American Standard ASME B30.16-2012**

**Australian Standard AS1418.2-1997**

**South African Standard SANS 1594:2007**

**NORSOK R-002: 2017.**

The design and specification of the William Hackett ATEX-C4 chain hoist includes:

- **LIGHT LOAD CAPABILITY:** the ATEX-C4 chain hoist is tested and certified at 2% of the chain hoist rated capacity
- **SAFETY LATCHES:** the ATEX C4 chain hoist top and bottom hooks are fitted with heavy duty cast steel latches. The latch and hook tip are integrated creating a strong and robust hook closure
- **OVERLOAD INDICATOR MARKS:** the ATEX-C4 chain hoist top and bottom hooks have, as part of the hook forging, overload indicator marks either side of the hook throat. By measuring the distance between the indicator marks, the hook can be quickly and easily checked to see if any stretch has occurred due to misuse or overloading
- **CORROSION PROTECTED:** specific internal components are corrosion protected
- **COPPER PLATED PARTS:** include top and bottom hook assemblies, chain end anchor, chain stripper, roller guides and handwheel
- **HANDCHAIN:** fitted with Grade 316L stainless steel handchain
- **LOADCHAIN:** supplied with EN818-7 zinc plated loadchain as standard with an option for stainless steel Grade 6 loadchain upon request
- **BODY COVERS:** epoxy powder coated
- **HOOK HOUSING:** the ATEX-C4 chain hoist top and bottom hook housing are secured with socket head cap screws/hex head bolts and nyloc insert locking nuts
- **FLEETING/CROSS HAULING:** the ATEX C4 chain hoist is tested and certified for fleeting or cross hauling applications up to 45° from the vertical without deration
- **WLL RANGE:** 500 Kg to 5 tonne
- **TWIN PAWL:** double safety; fitted as standard
- **OVERLOAD LIMITER:** available as an option upon request
- Other sizes available upon request

## ATEX-C4 Combined Chain Hoist and Push Trolley

Complies with the requirements of ATEX Directive 2014 / 34 / EU and Machinery Directive 2006 / 42 / EC

The William Hackett ATEX-C4 Combined Hoist and Trolleys meet and exceed the requirements of the following international standards:

British Standard BS EN 13157:2004 + A1:2009.

- ATEX anti-spark combined chain hoist and trolleys for use in hazardous environments
- Specific internal components corrosion protected
- Fitted with stainless steel handchain material 316L
- Supplied with EN818-7 zinc plated loadchain as standard with an option for stainless steel Grade 6 loadchain upon request
- WLL range of 500 Kg to 2 tonne
- Other sizes available upon request

# WH-PT Push Trolley

## WH-PT Push Trolley

The William Hackett WH-PT Push Trolleys meet and exceed the requirements of the following international standards:  
**British Standard BS EN 13157:2004 + A1:2009.**

This high quality trolley range is precision engineered in W.L.L. capacities from 500 kg to 10 tonnes.

Enabling exact positioning or easy traversing of large loads incorporating manual hoists, the William Hackett series push trolley can be supplied to suit various track widths within the standard beam range 1 and the extended beam range 2.

The runners (trolley wheels) are precision machined and they rotate on maintenance sealed ball bearings.

All William Hackett push trolleys are fitted with anti-jump bars and rubber end stops as standard.

## WH-GT Geared Trolley

The William Hackett WH-GT Geared Trolleys meet and exceed the requirements of the following international standards: British Standard BS EN 13157:2004 + A1:2009.

This high quality trolley range is precision engineered in W.L.L. capacities from 500 kg to 10 tonnes.

Enabling exact positioning or easy traversing of large loads incorporating manual hoists, the William Hackett series geared trolley can be supplied to suit various track widths within the standard beam range 1 and the extended beam range 2.

It has been designed so that the bottom of the hand chain loop is located approximately 500mm from ground level.

The runners (trolley wheels) are precision machined and they rotate on maintenance sealed ball bearings.

All William Hackett geared trolleys are fitted with anti-jump bars and rubber end stops as standard.

## WH-GT Corrosion Protected Geared Trolley

The William Hackett WH-GT Corrosion Protected Geared Trolleys meet and exceed the requirements of the following international standards: British Standard BS EN 13157:2004 + A1:2009.

This high quality trolley range is precision engineered in W.L.L. capacities from 500 kg to 5 tonnes.

Enabling exact positioning or easy traversing of large loads incorporating Manual hoists, the William Hackett series geared trolley can be supplied to suit various track widths with beam range 1 and the extended beam range 2.

It has been designed so that the bottom of the hand chain loop is located approximately 500mm from ground level.

The runners (trolley wheels) are precision machined and they rotate on maintenance sealed ball bearings.

All William Hackett geared trolleys are fitted with anti-jump bars rubber end stops as standard.

Part Code	WLL tonnes	Min. Radius of Curve m	a mm	b mm	c mm	e mm

# WH-PT ATEX Push Trolley

## WH-PT ATEX Push Trolley

Complies with the requirements of ATEX Directive 2014 / 34 / EU and Machinery Directive 2006 / 42 / EC

The William Hackett ATEX Push Trolleys meet and exceed the requirements of the following international standards: British Standard BS EN 13157:2004 + A1:2009.

This high quality trolley range is precision engineered in W.L.L. capacities from 500 kg to 2 tonnes.

Enabling exact positioning or easy traversing of large loads incorporating manual hoists, the William Hackett series push trolley can be supplied to suit various track widths within the standard beam range 1 and the extended beam range 2.

The runners (trolley wheels) are precision machined and they rotate on maintenance sealed ball bearings.

All William Hackett push trolleys are fitted with anti-jump bars and rubber end stops as standard. They are also fitted with solid bronze wheels and have a copper plated hanging plate. Other sizes are available upon request.

# WH-AT Adjustable Push Trolley

## WH-AT Adjustable Push Trolley

Manufactured in accordance with BS EN13155: 2003 + A2: 2009 - Cranes - Safety – Non Fixed Load Lifting Attachments.

The William Hackett WH-AT Adjustable Push Trolleys meet and exceed the requirements of the following international standards: British Standard BS EN 13157:2004 + A1:2009.

The WH-AT Adjustable Push Trolley features a light weight robust construction, allowing quick and effective installation onto various beams and girders.

The adjustable trolley is fitted with wheel guard anti-drop plates and precision ball bearing wheels allowing easy movement along the beam. It adapts to the beam width by turning the adjustable bar and is fitted with a locking mechanism for ensuring secure clamping to the beam.

W.L.L. capacities of 2.0 tonnes, 3.2 tonnes and 6.0 tonnes are available and the trolleys are designed to accommodate a range of beam widths.

Part Code	WLL tonnes	Min. Radius of Curve m	A mm	B mm	C mm	D mm	E mm	F mm	G mm	Beam Width M mm	Mass kg
014.200	2.00	0.7	204	276 - 322	100	20	21	2.5	320	76 - 203	8.10

CLAMPS*

# WH-BC Fixed Jaw Super Clamp

## Fixed Jaw Super Clamp

Manufactured in accordance with BS EN13155: 2003 + A2: 2009 - Cranes - Safety – Non Fixed Load Lifting Attachments.

The WH-BC fixed jaw super clamp is fitted with a 'gusset' in both jaws of the beam clamp maximising contact between the beam and beam clamp thereby increasing the grip of the beam clamp. A shackle is fitted to the bottom of the beam clamp allowing an easy connection of the hoist to be attached.

This fixed jaw super clamp can be used to an angle of 45° to the vertical. When the angle is moved away from the vertical the working load limit of the beam clamp needs to be reduced. Please refer to the table opposite on page 59 for the reduction in working load limits when side loads are applied.

Part Code	Model No.	WLL tonnes	Beam Range mm	Max. Beam Thickness mm	A mm	B mm	D mm	E max	E min	G mm	K max	K min	H mm	Mass kg

# WH-BC Fixed Jaw Super Clamp

The working load limits below and derations have been established specifically for most William Hackett clamps and only apply in overhead beam attachment i.e: DO NOT apply if clamps are to be used for lifting beams.

The tables apply to our clamps only (selected models) and we strongly advise that stress calculations should be carried out (by the user's engineering department) for all support steelwork.

**WARNING:** All clamps must be correctly applied to the beam by a competent person and fully hand tightened. If in doubt, contact the manufacturer for their recommendations.

**NOTE:** Clamp model WH-BC2 (027.200) is not suitable for any side loading as it is of lightweight design.

Although William Hackett is confident that our beam clamps could operate at 90 degrees without any reduction in efficiency, William Hackett do not recommend this type of use in application, as there will be a significant overturning moment generated on the beam flange and this could result in the actual supporting structure failing or being permanently deformed and or damaged. If clamps are used in any other way than that indicated above William Hackett will not accept any liability and would strongly recommend that this unsafe practice is not adopted.

## Reduction in Working Load Limits when Side Loads are Applied

Angle From Vertical	0°	0° to 15°	15° to 30°	30° to 45°
Reduction Factor	Nil	17%	34%	50%
Models	WLL	WLL	WLL	WLL

027.500, 027.500.E	5 tonne	4.1 tonne	3.3 tonne	2.5 tonne
027.600	6 tonne	5 tonne	4 tonne	3 tonne
027/1000	10 tonne	8.3 tonne	6.5 tonne	5 tonne
027/1500, 027/1500.E	15 tonne	12.4 tonne	10 tonne	7.5 tonne

# WH-UBC Universal Beam Clamp

## WH-UBC Universal Beam Clamp

Manufactured in accordance with BS EN13155: 2003 + A2: 2009 - Cranes - Safety – Non Fixed Load Lifting Attachments.

The William Hackett WH-UBC Universal Beam Clamp has been designed not only for vertical use, but also for side load applications, where conventional clamps are not suitable.

The Universal Beam Clamp is suitable for pulling and lifting at angles across the beam or as a semi-permanent anchor point.

It can be **loaded at any angle** and eliminates the use of spreader beams in various lifting operations.

Fitted with an adjustable locking mechanism, ensuring secure clamping to the beam.

Built-in suspension point for low headroom design.

Lightweight design allowing for quick clamping and unclamping.

W.L.L. capacities available at 3.2 tonnes, 5.0 tonnes and 10.0 tonnes and designed to accommodate a range of beam widths.

Part Code	WLL tonnes	A mm	B mm	C mm	D mm	E mm	F mm	G mm	Beam Width mm	Mass kg

# Hand Winch

## Hand Winch

Manufactured in accordance with BS EN13155: 2003 + A2: 2009 - Cranes - Safety – Non Fixed Load Lifting Attachments.

The positive action brake on the William Hackett hand winch can hold the load in any position. The brake is sealed in a strong steel cover to protect from dust and rain. It is compact, light weight and is of durable construction.

The winch should only be used for pulling.

A notable feature of the William Hackett hand winch brake system is that it is fitted with two pawls to provide extra safety under all operating conditions.
